# Managed IT Print

Seamlessly integrate physical print and digital information in addition to high performance printing and scanning with

**Canon**

# Introduction

## Create an Optimised, Secure and Sustainable Print and Scan Environment

Wavenet's partnership with Canon UK allows us to combine Canon's renowned portfolio of print, imaging, and software solutions with Wavenet's portfolio of products and services that you can trust and rely on, from IT support to cyber security, and unified communication to network management.

Canon's cutting edge products, services and solutions to help you achieve enhanced productivity, collaboration, security, compliance and sustainability goals, starting with the imageRUNNER ADVANCE DX range of products.

10 years ago, a printer was required only to produce physical copies of documents. That need hasn't disappeared, but to meet today's hybrid working styles, a printer needs new capabilities to make it a hub for both print and digital workflows.

Many organisations who are adopting long term remote working will have fewer employees in the office on a day-to-day basis. However, when employees are onsite, they will want to work as productively as possible. So, when it comes to document management, from printing a brochure, to scanning a contract, they need devices which are fast, simple to use and support efficient document workflows. Canon's latest printing devices offer state of the art scan and printing speeds to keep your business running as smoothly as possible.

**The imageRUNNER ADVANCE DX portfolio has been designed with effective hybrid working in mind, with a portfolio of smart multifunction devices, the latest document capture and processing technology, and inbuilt advanced cloud connectivity (subject to additional subscription licensing).**

The Wavenet-Canon portfolio is designed to be as easy to use as possible, with a consistent interface and user experience, no matter which device you're using. This makes introducing new devices easy for your workforce who don't have to learn new functionality. Meanwhile, the simplicity of the interface means they lose less time navigating the functions.

## Quick Facts

**i-SENSYS X C1333i  
C1333iF(Fax)**  
High quality, compact  
A4 colour multifunction  
printer

# imageRUNNER ADVANCE DX

## Security

The imageRUNNER ADVANCE DX portfolio is fully protected from a wider range of attacks, from verify system at start up, to firmware tampering and blocking of any unauthorised programs from being executed. The latter is provided by leading cybersecurity technology provider Trellix, with McAfee Embedded Control.

## Sustainability

Sustainability has never been higher on the corporate, or employee agenda.

The latest imageRUNNER ADVANCE DX Series produces up to 18% less CO2 and weighs 20% less than its predecessor. Meanwhile, its smart technology optimises the settings, minimising waste, energy, and paper consumption. For example, the device software can eradicate blank pages, while the enhanced processing power and preview capabilities of the series reduce the need to print and re-print key documents.

Electricity use is also kept as low as possible, thanks to advanced sleep modes, meaning that there is no excess use of power. Improvements to the meltability of the toner in our latest edition to the portfolio, the imageRUNNER ADVANCE DX C5800 Series, has resulted in a 15% reduction in TEC value compared to previous models with the same print speed. This achieves a faster print speed (70 ppm) with the same power consumption as the previous 60 ppm model.

These features help Canon's portfolio to support digital technology in keeping with modern organisational values: delivering and supporting maximum functionality, while having a positive impact on your workplace's environmental footprint.

# Support

## Managed Print Service (MPS Core)

Managed Print Services help to optimise, monitor and manage your print environment when you don't have time, staff or expertise to effectively do it yourself. MPS Core offers improved quality of service, enhanced user experience, optimised processes, and reallocation of costs for your printing solution.

### MPS Core Key elements

- **Single Point of Escalation:** A dedicated Client Services Executive will proactively monitor & manage your account, as well as take ownership of any escalations or queries you may have.
- **Auto Ink and Toner:** The auto replenishment of ink and toner service means you'll automatically get ink or toner sent to you whenever your printer is running low
- **Regular Reporting:** Capturing information is one thing, having it in a format that helps you take positive actions is another! Enhanced reporting has developed over the years into a best practice document which helps you take positive actions.
- **Monthly Health Check:** A snapshot report will show you monthly service calls, device status and remote device monitoring status, so you can rest assured your devices are functioning efficiently. Your Client Services Executive will highlight any concerns and suggest resolutions.

## Wavenet Support

Wavenet will be the first point of contact for your supported IT solutions including Canon IT Print devices.

Our support telephone lines are open between 8.45am and 5.30pm Monday to Thursday and 5.00pm Friday (excluding Bank Holidays).

Additional extended hours agreements are available for earlier starts, later finishes and weekend cover if required, please speak to your Wavenet Account Manager for further information.
